A REPORT

on

Industrial Training - I

Submitted in Partial Fulfillment of the requirements For the Degree of

Bachelor of Technology in CSE

By

Shivani Kumari

CSE II Year, III Semester

Registration No.: 24105103040

Netaji Subhas Institute of Technology (Patna)

Under the Supervision of

Dean

Ms. J. Dalei
(Academic Dean)
NSIT, Patna

Coordinator

Mr. Ramakant Singh
(Head of Department)
NSIT, Patna

to the

Faculty of B.Tech

Bihar Engineering University (BEU), 2024-28

CERTIFICATE OF COMPLETION

This is to certify that the report entitled **"Industrial Training – I"** is a bonafide record of the work carried out by **Shivani Kumari (Registration No.: 24105103040)**, a student of **Bachelor of Technology in Computer Science and Engineering (CSE)** during the academic session **2024–2028** in the **Second Year, Third Semester** at **Netaji Subhas Institute of Technology (NSIT), Patna**.

This report has been submitted in partial fulfillment of the requirements for the award of the **Bachelor of Technology (B.Tech)** degree under **Bihar Engineering University (BEU), Patna**.

The training was successfully completed at **C-DAC, Patna** on the topic **"OOP's Concepts using Core Java"**.

Ms. J. Dalei
(Academic Dean)
NSIT, Patna

Mr. Ramakant Singh
(Head of Department)
NSIT, Patna

EXTERNAL EXAMINER

Date: ………………….

Acknowledgement

I take this opportunity to express my heartfelt gratitude to all those who have supported and guided me throughout my **Industrial Training – I**, enabling me to successfully complete this report entitled **"Industrial Training – I"**.

Firstly, I would like to extend my sincere thanks to **Netaji Subhas Institute of Technology (NSIT), Patna**, for providing me with the opportunity to undertake this training, which has been a valuable learning experience in my academic journey.

I would also like to express my sincere gratitude to **C-DAC, Patna**, for organizing this training program on **"OOP's Concepts using Core Java"** and for providing excellent learning resources and practical exposure.

I am highly thankful to the respected faculty members and trainers, especially **Mr. Vaibhav Patle** and **Ms. Nishu**, for their continuous guidance, support, and valuable insights throughout the training period.

I would also like to thank **Ms. J. Dalei (Academic Dean)** and **Mr. Ramakant Singh (Head of Department)**, NSIT Patna, for their encouragement and support.

Finally, I extend my deep appreciation to my family, friends, and well-wishers, whose constant motivation and support have been a source of strength in successfully completing this training and report.

Place: Patna

Date:

Student Name: Shivani Kumari

Registration No.: 24105103040

List of Figures

List of Abbreviations

- **OOP** – Object-Oriented Programming
- **JDK** – Java Development Kit
- **JVM** – Java Virtual Machine
- **JRE** – Java Runtime Environment
- **SDLC** – Software Development Life Cycle
- **GUI** – Graphical User Interface
- **CLI** – Command Line Interface
- **API** – Application Programming Interface
- **DBMS** – Database Management System
- **IDE** – Integrated Development Environment
- **SQL** – Structured Query Language
- **CSV** – Comma-Separated Values
- **I/O** – Input/Output
- **CRUD** – Create, Read, Update, Delete
- **POS** – Point of Sale
- **RAM** – Random Access Memory
- **CPU** – Central Processing Unit

Certificate No.: C-DAC/PAT/2512/19016

CERTIFICATE

OF COMPLETION

This is to certify that

Shivani Kumari

PRN : STT-25128071916 has successfully completed
training cum internship in
OOP's concept using CoreJava
offered by C-DAC Patna
from 22.12.2025 to 02.01.2026 with grade A.

Ritesh R. Dhote
Scientist 'E' & HoD (ACTS)
C-DAC Patna

Grade Scale: A+ >=85%, A >=70% to <85%, B>=60% to <70% , C>=40% to <60% , Fail<40%

INTRODUCTION

The purpose of this Industrial Training – I was to bridge the gap between theoretical knowledge and practical implementation. In college, we learn many concepts, but this training helped me understand how these concepts are actually used in real-life situations.

This training aimed to provide hands-on experience in programming using Core Java. It helped me improve my coding skills and understand how to write clean and efficient programs. I also learned how different concepts of Object-Oriented Programming (OOP) like classes, objects, inheritance, and polymorphism are applied in real software development.

Another important purpose of this training was to develop problem-solving ability and logical thinking. By working on practical tasks and small programs, I gained confidence in coding and debugging errors.

Overall, this training helped me understand the basics of software development, improved my technical knowledge, and prepared me for future academic projects and industry work.

Objectives

The main objectives of the training were:

- To understand the fundamentals of **Java Programming Language**
- To learn and implement **Object-Oriented Programming (OOP) concepts**
- To gain practical knowledge of **Core Java features** such as classes, objects, inheritance, and polymorphism
- To develop problem-solving and coding skills
- To gain exposure to real-time project development
- To enhance technical and logical thinking abilities

Overview of Training Program

The Industrial Training – I was conducted at **C-DAC, Patna** for a duration of two weeks, from **22nd December 2025 to 3rd January 2026**. The training sessions were held daily from 9:00 AM to 1:30 PM.

The training focused on **"OOP's Concepts using Core Java"** and included both theory and practical sessions. In the beginning, basic concepts of Java were taught, such as data types, operators, and control statements. After that, we learned important Object-Oriented Programming (OOP) concepts like classes, objects, inheritance, polymorphism, and encapsulation.

As the training progressed, more advanced topics were covered, including interfaces, exception handling, file handling, collections framework, and multithreading. Each topic was explained with examples and practical coding, which made it easier to understand.

The sessions were conducted by experienced faculty members, **Mr. Vaibhav Patle** and **Ms. Nishu**, who guided us throughout the training and helped us clear our doubts. At the end of the training, we worked on a small project and gave a final assessment to test our understanding.

Overall, the training program was well-structured and helped me gain both theoretical knowledge and practical experience in Java programming.

COMPANY PROFILE

Introduction to the Organization

The **Centre for Development of Advanced Computing (C-DAC)** is a well-known research and development organization in India. It works under the Ministry of Electronics and Information Technology (MeitY), Government of India.

C-DAC was established to develop advanced technologies in the field of computing. Over the years, it has played an important role in the growth of Information Technology in India. It is especially known for its work in supercomputing, software development, and technical education.

C-DAC has many centers across India, and each center focuses on research, development, and training. The Patna center mainly focuses on providing training programs and skill development for students.

Location

The training was conducted at **C-DAC, Patna**, located in Bihar, India. This center provides a good learning environment with proper labs, systems, and experienced faculty members.

Services and Areas of Work

C-DAC works in many advanced areas of technology. Some of the main services and fields are:

- **High-Performance Computing (HPC):** Development of supercomputers for research and scientific work
- **Software Development:** Designing and developing software solutions for various industries
- **Cyber Security:** Working on data protection, security systems, and ethical hacking
- **Artificial Intelligence (AI) & Machine Learning (ML):** Developing smart systems and automation technologies
- **Embedded Systems & IoT:** Working on hardware-based programming and smart devices
- **Education and Training:** Providing various training programs for students and professionals

C-DAC is also known for conducting short-term and long-term courses that help students improve their practical skills and prepare for the IT industry.

Role in Education and Training

One of the important roles of C-DAC is to provide quality training to students. It organizes different training programs like programming, software development, and new technologies.

During my training, I attended a short-term course on **“OOP’s Concepts using Core Java”**. The training included both theory and practical sessions, which helped me understand the concepts clearly.

The training programs at C-DAC focus on real-world applications, which makes students industry-ready.

Organizational Structure

C-DAC follows a proper organizational structure to manage its work smoothly. The structure includes:

- **Director General:** Overall head of C-DAC
- **Centre Director:** Head of a specific center (like Patna)
- **Project Managers / Program Coordinators:** Manage projects and training programs
- **Faculty / Trainers:** Teach students and provide guidance
- **Technical Staff:** Help in lab work and system management

During the training, the sessions were conducted by **Mr. Vaibhav Patle** and **Ms. Nishu**, who guided us in both theory and practical work.

Fig. 1: Group Photo of Training Participants at C-DAC Patna

TRAINING DETAILS

Duration of Training

The Industrial Training – I was conducted for a period of **two weeks**, from **22nd December 2025 to 3rd January 2026** at C-DAC, Patna.

The training sessions were held daily from **09:00 AM to 01:30 PM**.

This duration was very helpful to understand both basic and advanced concepts of Java programming in a structured way.

Department

The training was conducted under the **Software Development / Training Department** of C-DAC, Patna.

This department focuses on providing technical knowledge and practical skills to students in the field of programming and software development. It also helps students to understand how real-world software systems are developed.

Tools and Technologies Used

During the training, I worked with different tools and technologies related to Core Java. These include:

- **Core Java (JDK):** Used for writing and running Java programs
- **Object-Oriented Programming (OOP):** Concepts like class, object, inheritance, polymorphism, etc.
- **Java Collections Framework:** Used to store and manage data
- **Exception Handling:** To handle runtime errors in programs
- **File Handling:** For reading and writing data in files
- **Multithreading:** To perform multiple tasks at the same time
- **IDE (Eclipse / IntelliJ IDEA):** Used to write and execute Java programs easily

These tools helped me gain practical knowledge and improve my coding skills.

Training Methodology

The training program was designed in a simple and effective way. Each topic was first explained in theory, and then practical examples were given.

- Trainers explained concepts using real-life examples
- After explanation, coding was done step-by-step
- Students were encouraged to practice on their own
- Doubts were cleared regularly

Daily / Weekly Activities

Week 1 (22nd December – 27th December 2025)

In the first week, the focus was on basic concepts of Java:

- Introduction to Java Programming Language
- Data Types and Operators
- Flow Control Statements (if-else, loops)
- OOP Concepts (Class and Object)
- Constructors and Parameter Passing
- Inheritance in Java
- Abstract Classes and Interfaces
- Packages and Import Statements
- Introduction to Arrays

This week helped me build a strong foundation in Java.

Week 2 (29th December 2025 – 3rd January 2026)

In the second week, more advanced topics were covered:

- Wrapper Classes and String Handling
- Exception Handling
- File Handling
- Collections Framework
- Multithreading and Inner Classes
- Project Work
- Final Assessment

During this week, I got practical exposure and worked on small programs and a project.

Overall Experience

The training experience at C-DAC Patna was very good. The sessions were interactive, and the trainers were supportive. I was able to learn new concepts and improve my practical skills.

This training helped me become more confident in Java programming and prepared me for future academic projects and real-world applications.

PROJECT WORK

Project Title

Retail POS System (Console-Based Application using Core Java)

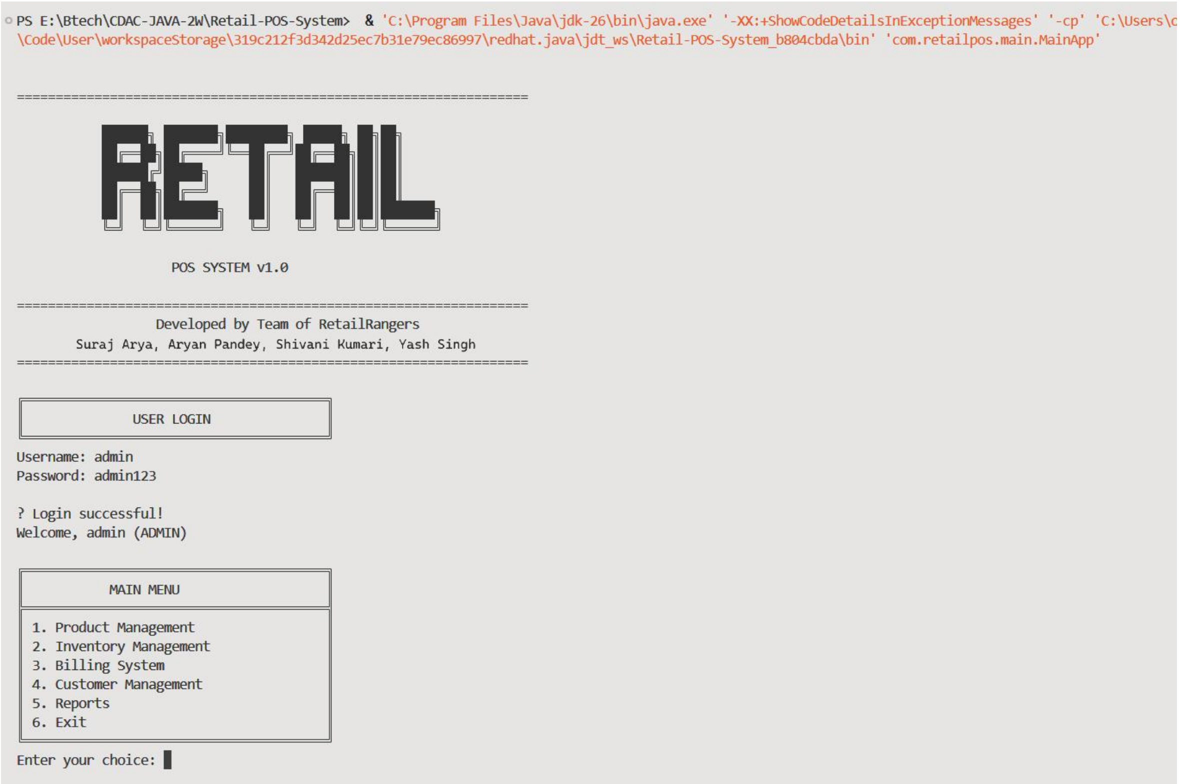

Fig. 2: Initial Screen of Retail POS System (Console-Based)

Introduction to the Project

During the training, we developed a **Retail Point of Sale (POS) System** using Core Java. It is a **console-based application**, which means it runs on the command prompt and does not use any graphical interface. The system works in a menu-driven way where users can select options and perform different operations easily.

The main purpose of this project is to manage retail shop activities such as product management, billing, customer details, and inventory. Instead of using a database, all the data is stored in simple text files. This helped us understand file handling in Java and how data can be saved and managed without using complex systems.

This project helped us understand how real-world applications are developed using Java. We learned how to apply OOP concepts, file handling, collections, and exception handling in one project. It also improved our coding skills, problem-solving ability, and confidence in developing real applications.

Objective of the Project

The main objectives of this project were:

- To apply **Core Java and OOP concepts** in a real project
- To understand **file handling** for storing data
- To create a simple **billing and inventory system**
- To improve **coding and problem-solving skills**
- To learn how to work in a **team environment**

Team Structure

This project was developed by a team of 4 members, where each member had a specific role and responsibility. The work was divided into different modules so that the project could be completed in an organized and efficient way.

- **Suraj Arya (PRN: STT-25128071920):**
  I worked on the **main application (MainApp.java)**, which controls the overall flow of the program. I created the menu-driven interface where users can select different options like product management, billing, and reports. I also handled user login and authentication. My main role was to connect all modules together and ensure the system runs smoothly.
- **Aryan Pandey (PRN: STT-25128071902):**
  He worked on the **model classes** such as Product, Customer, and Bill. These classes are used to store and manage data in the program. He implemented encapsulation using private variables and getter/setter methods and designed the data structure of the system.
- **Shivani Kumari (PRN: STT-25128071916):**
  She handled the **business logic part** of the project, including inventory management and billing system. She implemented features like adding/updating products, managing stock, and calculating bill amounts with GST.
- **Atul Anand Mishra (PRN: STT-25128071903):**
  He worked on **file handling and exception handling**. He managed reading and writing data from text files and created custom exceptions to handle errors like invalid input and insufficient stock.

Working in a team helped us understand how real software projects are developed in parts. Each member focused on their task, and finally all modules were combined to build the complete system. This improved our teamwork, coordination, and practical development skills.

Project Structure

The project follows a proper modular structure where different functionalities are divided into packages. This makes the system easy to understand, manage, and maintain. Each package has a specific role, and all parts are connected together to form the complete application.

Method Call Flow:

```
1. MainApp.createBill()                         ↓
2. ValidationUtil.validateCustomerId()          ↓
3. BillingService.createBill()                  ↓
4. BillingService.getCustomer()                 ↓
5. FileUtil.readFromFile(customers.txt)         ↓
6. Customer.fromFileString()                    ↓
7. Bill constructor                             ↓
8. MainApp.addItemToBill()                      ↓
9. InventoryService.checkStock()                ↓
10. InventoryService.getProduct()               ↓
11. Bill.addItem()                              ↓
12. BillingService.completeBilling()            ↓
13. InventoryService.reduceStock()              ↓
14. FileUtil.updateLine(products.txt)           ↓
15. FileUtil.writeToFile(bills.txt)             ↓
16. Bill.displayInvoice()                       ↓
```

Fig. 4: Method Call Flow

Technologies Used

- Core Java
- Object-Oriented Programming (OOP)
- File Handling (Text Files)
- Collections Framework (ArrayList, HashMap)
- Exception Handling
- IDE (Eclipse / IntelliJ IDEA)

System Features

The system provides different features that help in managing retail shop operations in an easy and efficient way. These features make the application useful and user-friendly.

User Login System

- Login using username and password
- Different roles like Admin and Cashier

```
USER LOGIN

Username: admin

Fig. 10: Reports

File Handling System

Instead of using a database, all data is stored in **text files**, such as:

- products.txt → Product details
- customers.txt → Customer details
- bills.txt → Billing records
- users.txt → Login credentials

This helped us understand how file handling works in Java.

Working of the Project

1. User logs into the system
2. Selects an option from the menu
3. Performs operations like adding products or creating bills
4. Data is stored or updated in text files
5. Output is displayed on the console

Learning Outcomes

Skills Gained

Through this project, several important technical and analytical skills were developed. Strong proficiency in **Java programming** was achieved, along with improved understanding of **Object-Oriented Programming (OOP)** concepts such as encapsulation, inheritance, and polymorphism. Skills in **problem-solving and logical thinking** were enhanced by designing features like billing systems and inventory management. Additionally, experience was gained in **debugging and error handling**, which improved the ability to write efficient and error-free code. Working with **file handling and collections** also strengthened data management skills.

Knowledge Acquired

This project helped in acquiring in-depth knowledge of how a complete software system is designed and implemented. A better understanding of **Java Collections Framework** (ArrayList, HashMap) was gained for efficient data storage and retrieval. Knowledge of **file handling techniques** was developed, enabling permanent data storage. The project also provided insights into **exception handling mechanisms** to ensure smooth program execution. Furthermore, it improved understanding of **modular programming and system design principles**, which are essential for building scalable applications.

Practical Exposure

The project provided valuable hands-on experience in developing a real-world application. It offered practical exposure to **software development life cycle (SDLC)**, including planning, designing, coding, testing, and debugging. Experience was gained in working with **real-time data processing**, user input handling, and system interaction. It also helped in understanding how different components of a system interact with each other. Overall, this project bridged the gap between theoretical concepts and practical implementation, preparing for future real-world development tasks.

Conclusion

Overall Experience

This project has been a highly enriching and insightful learning experience that contributed significantly to both technical growth and overall development. It provided an opportunity to practically implement theoretical concepts learned during the course, especially in **Java programming and Object-Oriented Programming (OOP)**. By working on this project, a deeper understanding of concepts such as **encapsulation, inheritance, polymorphism, abstraction, collections, file handling, and exception handling** was achieved.

The entire process of developing the project—from requirement analysis, designing the structure, coding, testing, to debugging—helped in understanding how real-world applications are built. It improved the ability to break complex problems into smaller modules and solve them step by step. Working on features like **data management, billing system, inventory control, and user interaction** gave practical exposure to real-time application scenarios.

During the project, several challenges were faced, such as handling errors, managing data efficiently, and ensuring proper program flow. Overcoming these challenges helped in improving **problem-solving skills, logical thinking, and debugging capabilities**. It also enhanced the ability to write clean, efficient, and well-structured code.

Additionally, this project became easier and more understandable for me because I had already studied **Java during my diploma** and had good hands-on practice in it. Due to my previous experience and consistent practice, I was able to understand and implement concepts more effectively. This prior knowledge also helped me in completing tasks efficiently and with better accuracy. In my diploma, I also achieved a **2nd rank in class with an A+ grade**, which further reflects my strong foundation and interest in this subject.

Overall, this experience has been extremely valuable in bridging the gap between academic knowledge and practical implementation, making it a strong foundation for future software development work.

Importance of Training

Industrial training is an essential part of an engineering curriculum as it provides real-world exposure and practical knowledge that cannot be fully gained through classroom learning alone. It plays a vital role in developing technical expertise and understanding how concepts are applied in real industry environments.

Through training, students gain hands-on experience in working with technologies, tools, and frameworks used in the industry. It helps in understanding the **Software Development Life Cycle (SDLC)**, including planning, designing, coding, testing, and deployment. This practical exposure enhances the ability to work on real-time projects and prepares students for professional challenges.

Training also helps in developing important soft skills such as **communication, teamwork, time management, and problem-solving**. Working in a structured environment improves discipline and teaches how to meet deadlines and work under pressure. It also builds confidence and prepares students for interviews and job roles.

Another important aspect of training is learning **industry standards and coding practices**, which are essential for developing scalable and maintainable software. It helps in understanding how professional developers write code, collaborate, and manage projects efficiently.

Overall, industrial training is crucial for shaping a student's career. It provides a platform to apply theoretical knowledge, gain practical experience, and develop the skills required to become a competent software developer. This experience not only enhances technical abilities but also builds confidence and prepares for future career opportunities in the field of technology.
